

My wife and I are RVers and have satellite radio. We travel all over the US and we need our satellite radio's weather and traffic reports when we travel. We also belong to AARP and we have been in contact with other AARP members all over the US discussing our right to receive weather and traffic on our satellite radio. Why would anyone want to deny millions of people this right. I want to urge the FCC to reject NAB's petition 04-160. I have asked my friends in AARP to help with this matter and we are also going to contact our congressmen about this. Thanks, Roy D. Adkins
